

# Post Doctoral Fellow in Computer Science- CAD, Design and Test

Recent Ph.D graduates with an interest in VLSI, Architecture, CAD and Test are invited to apply for a Post Doctoral Fellow position at the University of Bristol in United Kingdom. The university counts among Europe's prestigious ranked among best universities worldwide by Peterson Guide for study Abroad (2001). The University, too, is notable as an institution with Winston Churchill as a Vice Chancellor and incorporating Nobel Laureates likes of Paul Dirac.

The University of Bristol has a keen appreciation of excellence in education, admitting only seven percent of all applicants (compared to, for instance, a 11 % admittance rate at Harvard, or 12 % at Princeton). Fiercely supportive of research/scholarship, the University has recently received 7.5 Million (British) Pounds from the government, as grants geared toward expansion of computer science and engineering research programs especially. Recent rankings place the computer science and electronic in consensus to 5 within UK.

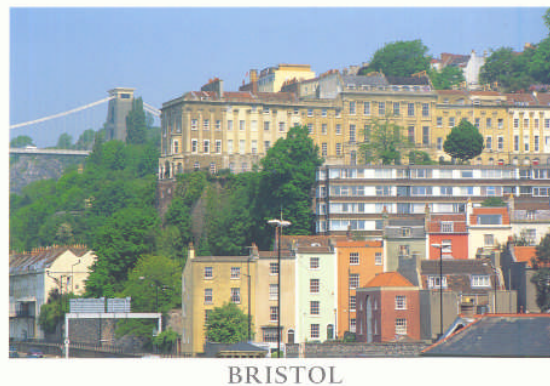

Located 100 miles from London, Bristol is near the coast with Wales, with a population of half-million. Picturesquely perched on hills, a river meandering throughout, Bristol's night-life is vibrant, tempered by near-by Bath's charm & shopping-making for, overall, a very fine quality of life. The climate is temperate, without extremes, in this part of "England's green and pleasant land"
